EQUIPMENT FOR DEMINERALIZED WATER PRODUCTION BY ION EXCHANGE TECHNOLOGY

MSA - manual semi-automatic working

A - automatic working

ver. 005-21/04/2008 ANG

DEWA

THROUGH-FLOW EQUIPMENT FOR DEMINERALIZED WATER PRODUCTION BY ION EXCHANGE TECHNOLOGY KATEX - ANEX

PRODUCT - DEMIWATER WITH CONDUCTIVITY TO 2mikroS/cm

REGENERATION WITH HCl (33%) AND NaOH (50%)

WASTE WATER MUST BE NEUTRALIZED IN THE NEUTRALIZING PLANT

CONDUCTIVITY OF PRODUCED DEMIWATER IS MONITORED PERMANENTLY

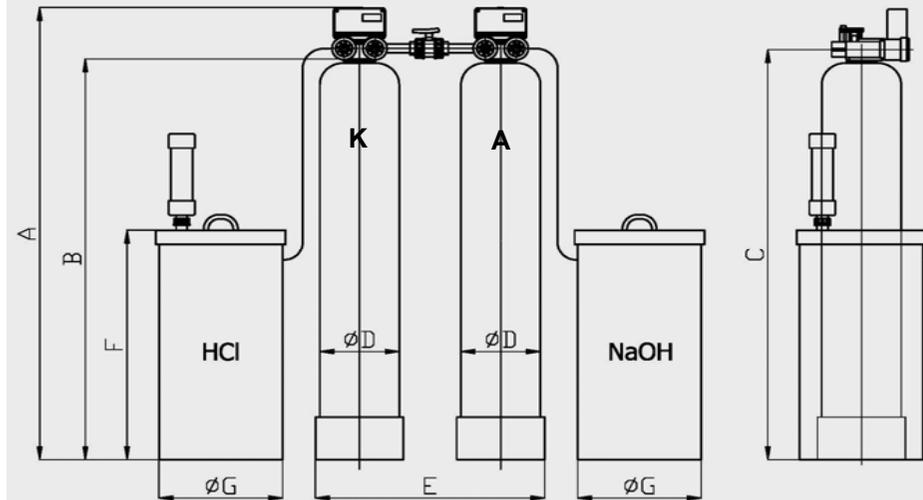

Usage, application

- boiler houses and exchanging stations
- car washing facilities
- sheet glass manufactrue
- glass ware manufactrue
- laboratories
- photographic industry
- manufactrue and preparation of water dilutable paints
- galvanizing plants
- paint shops, specially when using paints diluted with water
- steam generators for different use

DEWA MSA XXX

Simple, manual,

Basic characteristics of unit

- Product conductivity measurement is not bound to regeneration start. Demineralized water output is not blocked if conductivity of the demineralized water is exceeded. Measurement range 3 to 1000 $\mu\text{S}/\text{cm}$.

- Each regeneration (katex – anex) can be started manually anytime, pressing the push button, or utilize the regeneration start in time intervals of 1 to 14 days. Regeneration mode (4 + 4 cycles) is programmable.

- Ion exchanger volume in columns (katex, anex) need not be the same.

- Output of demineralized water is closed during the unit regeneration.

- Regenerants: HCl, NaOH

Technical parameters

inlet water minimum pressure	0,2 Mpa
inlet water maximum pressure	0,6 Mpa
inlet water maximum temperature	40°C
el. connection	230V/50Hz/10 W

... and further larger units, if required

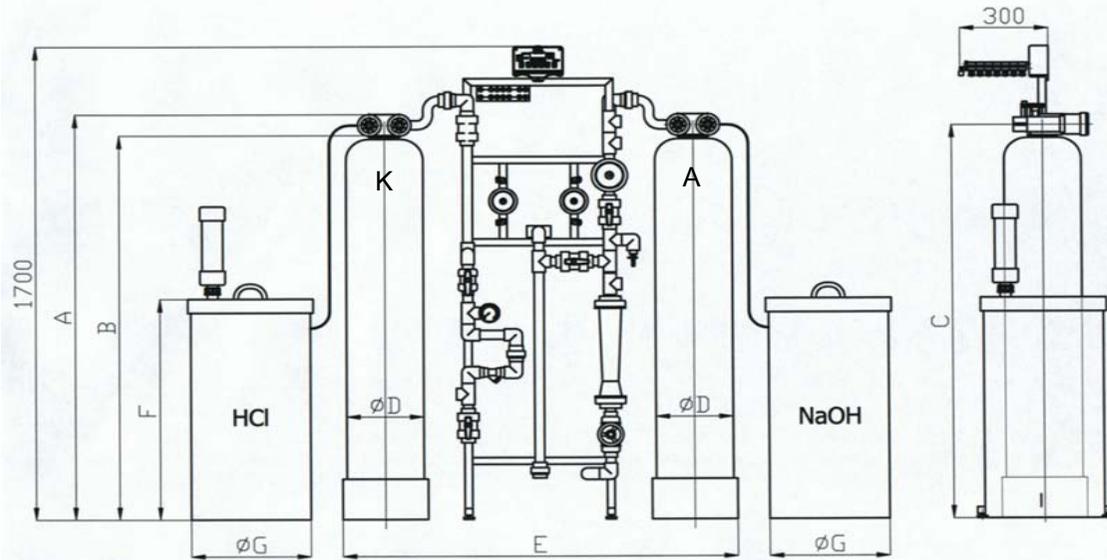

* Two 50 l reservoirs (dual neck cans with the vapour trap (on HCl container))

** fabricated containers, for HCl, with water lock and vapour trap

*** KDM = demineralization unit capacity for one cycle at inlet water conductivity of 300 μS

DEWA A XXX

High level standard, fully automatic ion exchanger demistation.

Basic characteristics of unit

- Simple, fully automatic operation and unit regeneration.
- Product conductivity measurement is bound to demiwater output. Output will be automatically shut off, if demiwater conductivity exceeds preset limit. Measurement range 3 to 40 $\mu\text{S}/\text{cm}$.
- Regeneration of demistation starts automatically, after exceeding the preset limit of conductivity and is fully automatic. Regeneration of the station may also be started by pressing the push button. Regeneration mode (4 + 4 cycles) is programmable.
- Ion exchanger volume in columns (katex, anex) need not be the same.
- Output of demiwater is closed during the unit regeneration.
- Regenerants: HCl, NaOH
